# Das ist Volkswagens 20.000-Euro-Elektroauto

Die Preisklasse von 20.000 Euro ist bei Elektroautos hart umkämpft, andere Hersteller haben VW schon abgehängt. Doch deren Modelle bieten für wenig Geld auch wenig. Kann das VW-Einstiegsauto beides sein: günstig und gut?

The demand for the "budget-friendly electric car" is high among customers in Germany. YouGov's study reveals that over 50% of participants cite "high purchasing costs" as the primary deterrent from choosing electric vehicles, which outweighs concerns about range and charging station availability.

The market for affordable electric vehicles is becoming more competitive. The Leapmotor 03 (Chinese roots, Stellantis adopted) is currently being produced in Poland, while the BYD Seagull, which has been successful in China, is anticipated to arrive in Europe in 2025 for a price of €18,000.
